## INSTALLATION INSTRUCTIONS

- A. Attach pivot bar (13) to Moldboard (1) using pivot bolts (21) coated with chassis lubricant, and locknut (24).
- B. Attach trip springs (14) to pivot bar (13) and moldboard (1) with eye bolts (18), Locknuts (24) and Finish Nut (20). Flat end of eye bolt (18) must be in a vertical position, as shown in Figure 2, to hinge properly when moldboard (1) trips. Proper tension is attained when trip spring (14) coils begin to separate and then tighten top locknut (24) four additional turns. Tighten bottom Finish nut (20) to secure eye bolt (18) in position. Install Eye Bolt Caps (19) over threads. See Figure 1.
- C. Assemble A-Frame (15) to pivot bar (13) using king bolt (22) and locknut (24). Grease king bolt (22) prior to installation.
- D. Install power angling rams with hoses to A-Frame (15) using 5/8-11 x 3-1/4" bolt and locknut (packed in hardware bag 08363 in Electro-Touch carton). Attach piston end of ram to pivot bar (13) using 5/8-11 x 4-1/2" Bolt (23) and locknut (24).
- E. Straighten end of plow markers (8) so they will be vertical after installation. Attach using 1/4-20 x 1" bolt (10), clamp (9), lockwasher (12) and locknut (11).
- F. Secure the moldboard-pivot bar-A-frame assembly to vehicle at the clevis frame using hinge pins (16) and Linch pin (17). Attach lift chain to lift arm allowing sufficient slack to allow moldboard to follow ground contours. Attach loose end of chain with the cable tie (25).
